

PATIENT INFORMATION MANAGEMENT SYSTEMAbstract of the Invention

A computer product, method, and system for managing patient prescription information is provided. A patient prescription for a specified medication is received, typically at a pharmacy, where the availability of insurance coverage from an insurance company for the patient prescription is verified. In addition, an insurance payment category for the prescription is verified. Payment is collected from the patient based on the payment category. The payment category and the payment is transmitted to the insurance company exclusive of the medication information.
